

Our Goal

Current Situation

 Nearly 30% of adults in the U.S. take 5+ medications.¹

 Drugs are involved in 80% of treatments & impact all aspects of a patient's life.²

 10,000 prescription medications are available on the market.³

 Medical errors are the third leading cause of death.⁴

 Only 13% of primary care physicians consult with a pharmacist before prescribing new prescriptions.⁵

 A recent study reveals a mean of 49 seconds is spent by physicians and patients talking about a new medication during a mean office visit time of 15.9 minutes.⁶

What We Spend

- 
- Rx drug costs are rising at double-digit rates ¹
 - Medication-related morbidity & mortality costs exceeds \$528B annually²
 - Rx drug spending exceeds \$300B a year³
 - One in every four commercial health plan dollars is spent for prescription medications ⁴
 - Illness and death from non-optimized medication therapy cost \$528.4B annually— equivalent to 16% of total U.S. health care expenditures ^{5, 6}
 - Annually, inpatient preventable medication errors cost approximately \$16.4B & outpatient preventable medication errors cost about \$4.2B ⁷

What We Waste

■ Dose Too High (7%) ■ Inadequate Therapy (58%)
■ Adverse Reaction (14%) ■ Unnecessary Therapy (6%)
■ Non-Adherence (15%)

Between 50% and 75% of patients do not take their medications as prescribed.^{1, 2}

• **\$528.4B annual**—cost of non-optimized medication therapy³

• **275,689 deaths**—from non-optimized medication therapy⁴

• **\$2,481-\$2,610**—average cost of an individual experiencing treatment failure or new medical problems after initial prescription use⁵
